## **Savannah River Site 2008 Illness and Injury Surveillance Report**

### **At A Glance**

The 9,569 employees at Savannah River Site (SRS) in 2008 represented an increase of 7 percent from 2007. The SRS work force has declined 21 percent since 2003, when there were 12,111 workers. Since 2003, women have accounted for approximately 25 percent of the work force. The average age of Savannah River Site workers has remained constant since 2005, with an average age of 49 years and 47 years among men and women, respectively.

Savannah River Site reported 3,808 absences in 2008, a 14 percent increase from the 3,347 absences reported in 2007. The increase in absences is not attributed to any particular diagnostic category. The absence rate has increased steadily since 2006. The explanation for this increase is unclear.

In 2008, the work force absence rate was 58.2 per 100 women and 34.0 per 100 men. The higher absence rate among women than among men is consistent with SRS absence rates since 2003. The distribution of diagnoses has been similar for men and women over this time period. In general, women reflect higher absence rates than do men across the sites participating in the Illness and Injury Surveillance Program (IISP). The average length of absence among SRS workers was 16 days for women and men in 2008.

Women in the work force lost 22,074 calendar days due to illness and injury in 2008. Respiratory conditions (24 percent), musculoskeletal conditions (19 percent), and unspecified symptoms (11 percent) accounted for 54 percent of all reported diagnoses.

Men lost 39,840 calendar days due to illness and injury. Over half of their reported diagnoses (52 percent) involved respiratory conditions (24 percent), musculoskeletal conditions (17 percent), and unspecified symptoms (11 percent).

Respiratory disorders, unspecified symptoms, and disorders of the musculoskeletal system were the top 3 diagnosis categories reported by men and women at SRS from 2003 to 2008. Diagnosis rates for disorders of the respiratory and musculoskeletal systems were among the highest observed for all DOE IISP sites from 1998 to 2007.

Line Operators had the highest absence rate and Crafts workers had the lowest absence rate among both women and men. The distribution of diagnoses is similar for each occupational group. Women in the Security and Fire occupational category reported no absences in 2008. The high rate among Line Operators was typical of the pattern noted among all IISP sites as a group from 1998 through 2007.

In 2008, SRS workers reported 62 sentinel health event diagnoses. Carpal tunnel syndrome accounted for 19 of these diagnoses. Workers reporting carpal tunnel syndrome were aged 40 and above and most frequently employed in the Technical Support occupational group. There were 5 diagnoses of chronic beryllium disease. The remaining SHEO diagnoses were not attributed to any particular diagnostic category.

In 2008, SRS reported 33 OSHA events, a 13 percent increase over the 29 OSHA events reported in 2007. The 2007 total was the lowest number of OSHA events reported since 2003. The number of lost or restricted workdays reported in 2008 decreased to 648 days compared with 842 days in 2007.

Eleven (33 percent) of the 33 workers reporting an OSHA event were Line Operators. This occupational group comprised only 18 percent of the work force. Falls accounted for 3 of the 11 events; 1 fall resulted in 142 restricted workdays.

## Sentinel Health Events for Occupations (SHEOs)

An occupational sentinel health event (SHEO) is a disease, disability, or death that is likely to be occupationally related. Although sentinel health events may indicate an occupational exposure, many may result from nonoccupational exposures. Sentinel health events are therefore assessed in two categories:

*Definite Sentinel Health Events:* Diseases that are unlikely to occur in the absence of an occupational exposure (e.g., asbestosis).

*Possible Sentinel Health Events:* Diseases that may be occupational but can also occur in the absence of an occupational exposure (e.g., lung cancer or carpal tunnel syndrome).

**Figure 16. Characteristics of SHEOs by Gender**

	Total Number of SHEO Diagnoses		Total Number of Days Absent	
	Men	Women	Men	Women
<b>Definite</b>	<b>12</b>	<b>10</b>	<b>118</b>	<b>820</b>
<b>Possible</b>	<b>30</b>	<b>10</b>	<b>465</b>	<b>1,117</b>
