Y-12 National Security Complex
2008 Illness and Injury Surveillance Report

At A Glance

The Y-12 work force consisted of 5,027 employees in 2008. The size of the work force has been about 5,000 since 2003. Women made up about 27 percent of all workers, which is consistent with other DOE sites participating in the Illness and Injury Surveillance Program (IISP).

There were 978 absences reported in 2008, an increase of 73 absences from 2007 but less than the high of 1,043 absences reported in 2003.

Line Operators had the highest absence rate among men and Service workers had the highest absence rate among women in 2008. Professional workers had the lowest absence rate for men and Crafts workers had the lowest absence rate for women. There was little change in absence rates from 2003 to 2008 among men in the Line Operators and Professional job categories. Among women, the absence rates for Service workers declined from 2003 to 2005 and then increased from 2006 to 2008, with the 2008 rate returning to the same level as in 2003. Absence rates for women in the Crafts group declined dramatically, with a greater than five-fold decrease in rates during the period 2003 to 2008.

Among both men and women, disorders of the musculoskeletal system and respiratory conditions have been among the 3 more common diagnoses since 2000. These 2 diagnostic categories are typically among the 3 more commonly reported at DOE sites participating in the IISP.

Women lost 12,229 calendar days due to injury and illness with an average length of absence of 35 days. Men lost 25,560 calendar days due to injury and illness with an average absence lasting 41 days. The average length of absences has remained stable since 2003 for both men and women.

Age-adjusted rates for all illness and injury diagnoses combined have been fairly constant for both men and women since 2003.

Eighteen diagnoses for sentinel health events were reported in 2008. Eight diagnoses involved carpal tunnel syndrome, with 3 of the diagnoses reported by female Professional workers and 3 diagnoses reported by male Line Operators. There were 4 respiratory system diagnoses, 2 of which were for berylliosis reported by 2 male workers (1 Crafts worker and 1 Service worker). The remaining diagnoses were reported for 3 other organ systems.

There were 15 OSHA-recordable events among women and 52 events among men. The rate of OSHA events among the Y-12 work force in 2008 was 1 per 100 workers, a decrease from 2007. OSHA event rates have declined at Y-12 since 2003, similar to the decline that has been observed nationally and within DOE.

Injuries accounted for 69 percent of the diagnoses reported by men and 48 percent of the diagnoses among women. The most common types of injuries were open wounds and sprains and strains among men and sprains and strains and fractures among women. Two employees (1 female Service worker and 1 male Crafts worker) reported exposure to an airborne irritant.

Among women, Crafts workers had the highest rate of OSHA events (4 per 100 workers); Line Operators had the highest rate of OSHA events among men (5 per 100 workers). Administrative Support workers had the lowest rate of OSHA events among women. Male Technical Support workers reported no OSHA events in 2008.

The number of OSHA events reported by men decreased less than 5 percent from 56 events in 2007 to 52 events in 2008. However, the total number of lost and restricted days declined dramatically for men, from 1,192 days in 2007 to 527 days in 2008 (56 percent decline). We observed a similar decline in the average number of lost and restricted workdays in 2008 (10 days versus 21 days in 2007). Female workers also reported decreases in number of OSHA events and workdays lost and restricted in 2008, but they were smaller than the decreases for men.

Sentinel Health Events for Occupations (SHEOs)

An occupational sentinel health event (SHEO) is a disease, disability, or death that is likely to be occupationally related. Although sentinel health events may indicate an occupational exposure, many may result from nonoccupational exposures. Sentinel health events are therefore assessed in two categories:

Definite Sentinel Health Events: Diseases that are unlikely to occur in the absence of an occupational exposure (e.g., asbestosis).

Possible Sentinel Health Events: Diseases that may be occupational but can also occur in the absence of an occupational exposure (e.g., lung cancer or carpal tunnel syndrome).
