Plan for How You Will Respond to Major Incidents with Potential Chemical or Radiological Exposures

What would you do if a tractor-trailer truck overturned and released dangerous chemicals in the vicinity of your home, workplace, or child's school?

What if a train car leaks hazardous chemicals or nuclear waste near your home, workplace, or child's school?

What if a local business fire occurs during which toxic chemicals are released near where you are driving, and traffic becomes gridlocked, increasing your risk of exposure?
