MAYbe, at night, bats... Student Challenge

Did you know that bats can help

us to create a green world? Read

on to figure out how they do that!

Bats are nocturnal, which means

they are active at night. Night flowers
MAYbe, at night, bats... Student Challenge

Rely on bats for their pollination.

In return, bats need them for nectar and fruit. In fact, some bats have long tongues or long noses to reach the nectar at the bottom of...

flowers.

Bats are seed dispersers.

They eat the fruit and drop the seed with its droppings. The seed sprouts and grows!
MAYbe, at night, bats... Student Challenge

Some bats eat insects and control pests. Bats are indicators of the quality of the environment. They suffer when there is less food.
So the next time you see a bat, say thanks for all that they do.
