

U.S. Army Institute of Surgical Research

2021 Virtual Summer Undergrad Research Program - Request for Intern – ISR-BCRD-02

Department: Blood Coagulation Research (BCRD)

What are your expectations for the student?

The student will engage in research using battlefield data to optimize how we deliver care at the point of injury. We previously and successfully used this model to improve adherence to guidelines and inform training and equipping requirements.

How would the student benefit from working on your project:

The students will work with our team towards 1-2 publications that will be indexed on PubMed. They will learn about battlefield relevant research and methods towards answering scientific questions.

Brief project description (please list the skills and techniques they will learn):

They will have an opportunity learn about several key areas for clinical research:

- Basic statistical skills
- Scientific through process and study design
- Scientific writing
- Peer-review process

Would you be interested in advising the intern for writing an abstract for a conference proceedings publication (example at the link below)? **Yes**
