Kansas City Plant
2007 Illness and Injury Surveillance Report
At A Glance

Since KCP began participating in the DOE Illness and Injury Surveillance Program (IISP), the size of the work force has decreased 17 percent, from 3,170 in 2002 to 2,621 in 2007. There were 648 (25 percent) women and 1,973 (75 percent) men in the work force in 2007. The ratio of women to men has been constant since 2002 and is similar to the ratio seen among all DOE IISP sites.

Workers in the Professional group had the lowest absence rate among women and Crafts workers had the lowest rate among men. Women in the Security and Fire group and men in the Service category had the highest absence rates.

Women lost 1,975 calendar days due to injury and illness. Musculoskeletal conditions (27 percent), respiratory conditions (14 percent), injuries (12 percent), and unspecified symptoms (12 percent) accounted for 65 percent of all reported diagnoses among women.

Men lost 3,411 calendar days due to injury and illness. Fifty-six percent of all reported diagnoses among men were due to musculoskeletal conditions (22 percent), injuries (17 percent), and digestive conditions (17 percent).

Among women and men, the rate of illness and injuries increased with age. This same trend is seen across the DOE complex among IISP sites.

Among women, the rate of all diagnoses combined, which increased 77 percent from 2003 to 2006, decreased to near the 2003 rate in 2007. Among men, the rate, which began to decrease in 2006, continued to decrease in 2007. The decrease in the rates for men and women was not due to any particular diagnostic category but rather a decrease in many categories.

The 2007 age-adjusted rates for all diagnoses increased among Professional, Technical Support, and Security and Fire groups for men compared with 2006. Among women, the 2007 rates declined in all occupational groups compared with 2006.

Ten diagnoses for sentinel occupational health events were reported. Carpal tunnel syndrome accounted for 8 of these diagnoses. The other 2 diagnoses were for contact dermatitis and fractured femur. The carpal tunnel diagnoses were reported by workers from 6 of the 7 occupational groups.

Thirteen OSHA-recordable events among men and 9 OSHA-recordable events among women produced an event rate of 1 per 100 workers for both men and women in 2007.

Injuries accounted for almost half (49 percent) of the diagnoses. Falls and overexertion and strenuous movements were the most frequent types of accidents.

OSHA events were responsible for 27 days lost and 168 days of restricted duty in 2007. Four falls recorded among Technical Support and Administrative Support workers produced 78 percent of the lost workdays and 42 percent of the days on restricted duty.

Sentinel Health Events for Occupations (SHEOs)

An occupational sentinel health event (SHEO) is a disease, disability, or death that is likely to be occupationally related. Although sentinel health events may indicate an occupational exposure, many may result from nonoccupational exposures. Sentinel health events are therefore assessed in two categories:

Definite Sentinel Health Events: Diseases that are unlikely to occur in the absence of an occupational exposure (e.g., asbestosis).

Possible Sentinel Health Events: Diseases that may be occupational but can also occur in the absence of an occupational exposure (e.g., lung cancer or carpal tunnel syndrome).
